Control Web Panel Requirements

Control Web Panel (CWP) · https://wpemailmanager.com/docs/control-web-panel-requirements/

For WP Email Manager to integrate with Control Web Panel, the following conditions must be met:

1. You have root access to the server.
2. The account that will manage the email accounts must have reseller capabilities.
3. You have an api key for the root user, **not** for the reseller account managing email accounts. Learn how to generate an api key here. The api key generated from CWP panel should have following capabilities:
   - Listing account details.
   - Adding, Updating, Deleting, Listing, Suspending and Unsuspending email accounts.
   - Adding, Updating, Deleting, Listing, Suspending and Unsuspending email admin server.
   - Adding, Listing and Deleting domains and subdomains.
   - The format request is set to *json*.

4. The mailbox table in postfix database has been modified such that the **default values** for the ***phone*** and ***email_other*** columns are set to null or any other value.
5. As you configure the plugin's general settings, enter the account which will manage the email accounts (reseller account), **not** the root user.

Submit a support ticket if you need assistance setting up your Control Web Panel.
