Email Account Login Shortcode

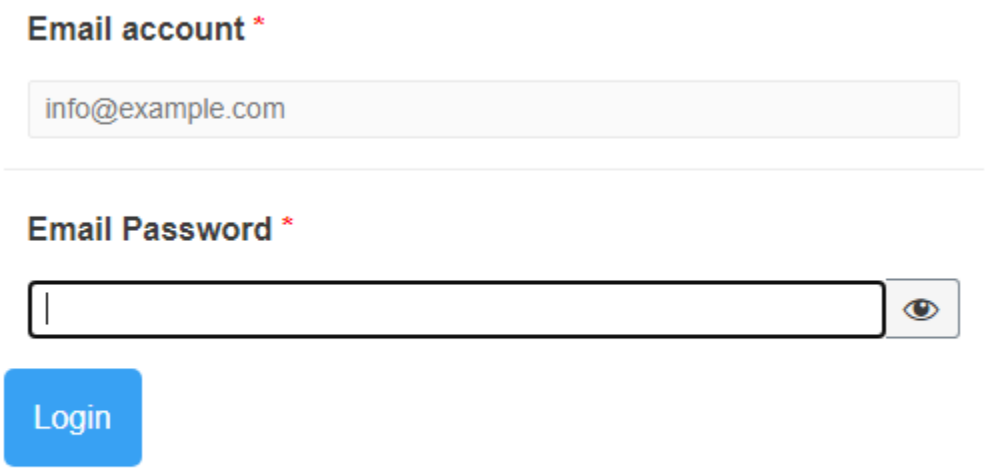

Shortcodes · https://wpemailmanager.com/docs/email-account-login-shortcode/

NOTE: This shortcode works only if your server uses cPanel.

The email account login shortcode renders a form where one enters their email address and password. If the credentials are valid, they are redirected to webmail where they can access their emails. This works for email accounts hosted on your server.

Use the following shortcode to render the form

```
[wp_email_manager_account_login]
```

How the form displays depends on your theme.
