How to Add a DNS Record

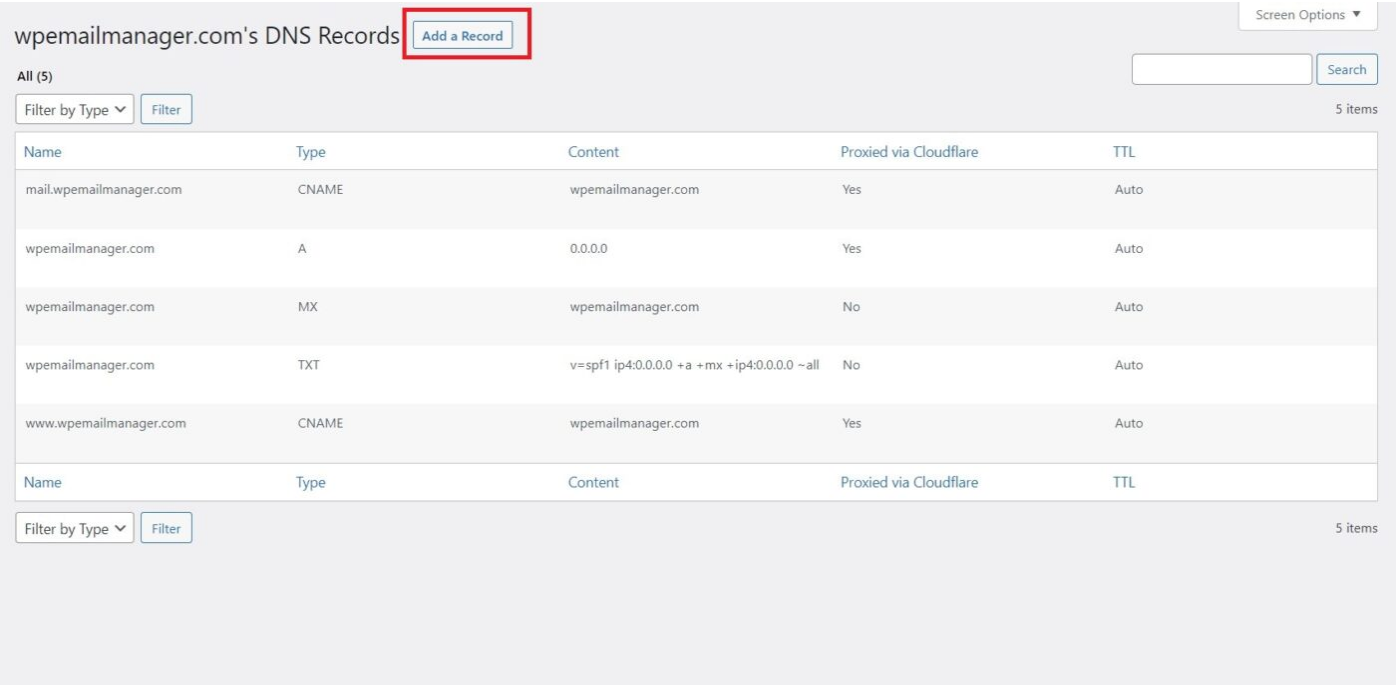

Cloudflare · https://wpemailmanager.com/docs/how-to-add-a-dns-record/

Do the following to a DNS record:

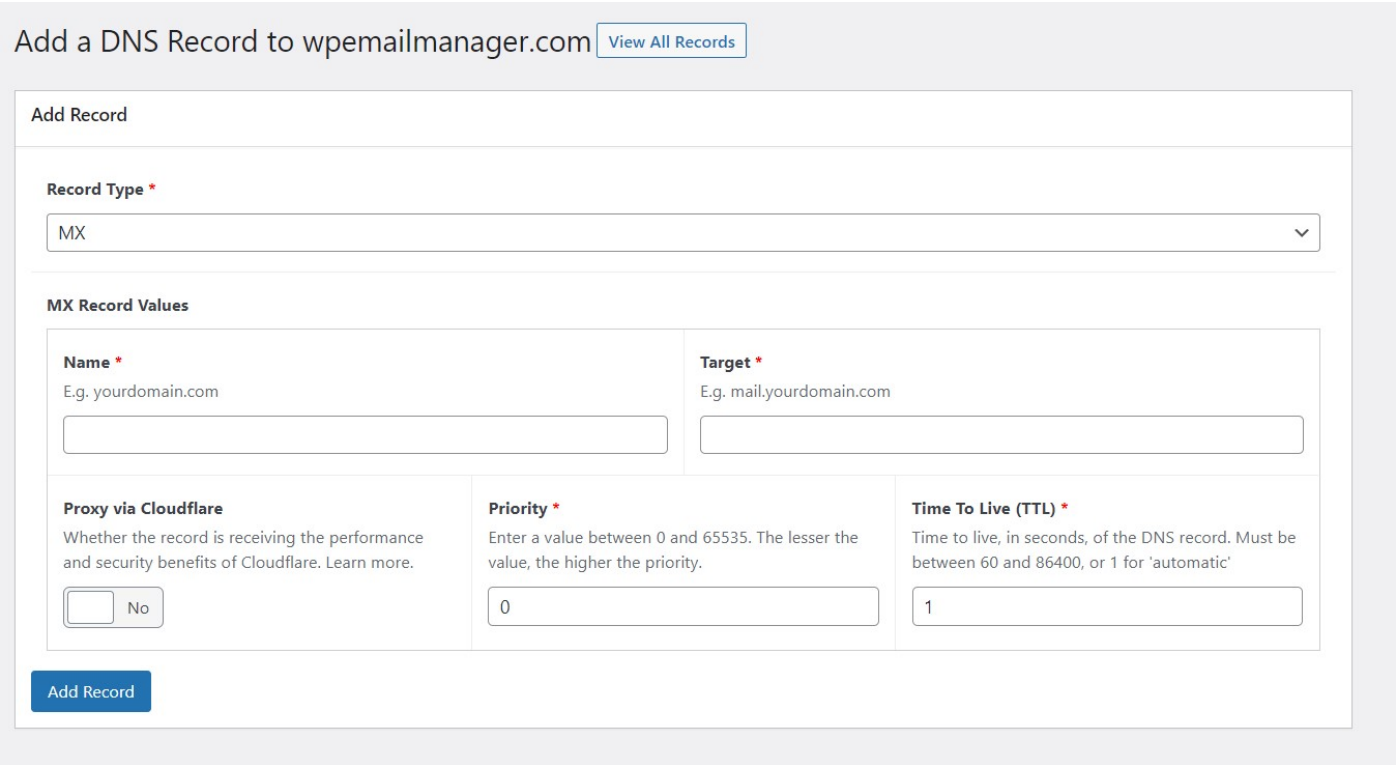

1. Ensure that the Domain Manager Addon is active, and that the DNS Management functionality is enabled.
2. Go to **Email Manager > Domains** to see a list of domains that you have added to your email server via the addon.
3. Under the domain name, click on Manage DNS Records link.

4. Now click on the Add a Record button

5. On the Add New Record page, fill in the relevant information and save.

Supported DNS record types are: A, AAAA, CNAME, MX, NS, SPF and TXT. Need more? Let us know here.
