How To Add An Exisiting Domain To Cloudflare

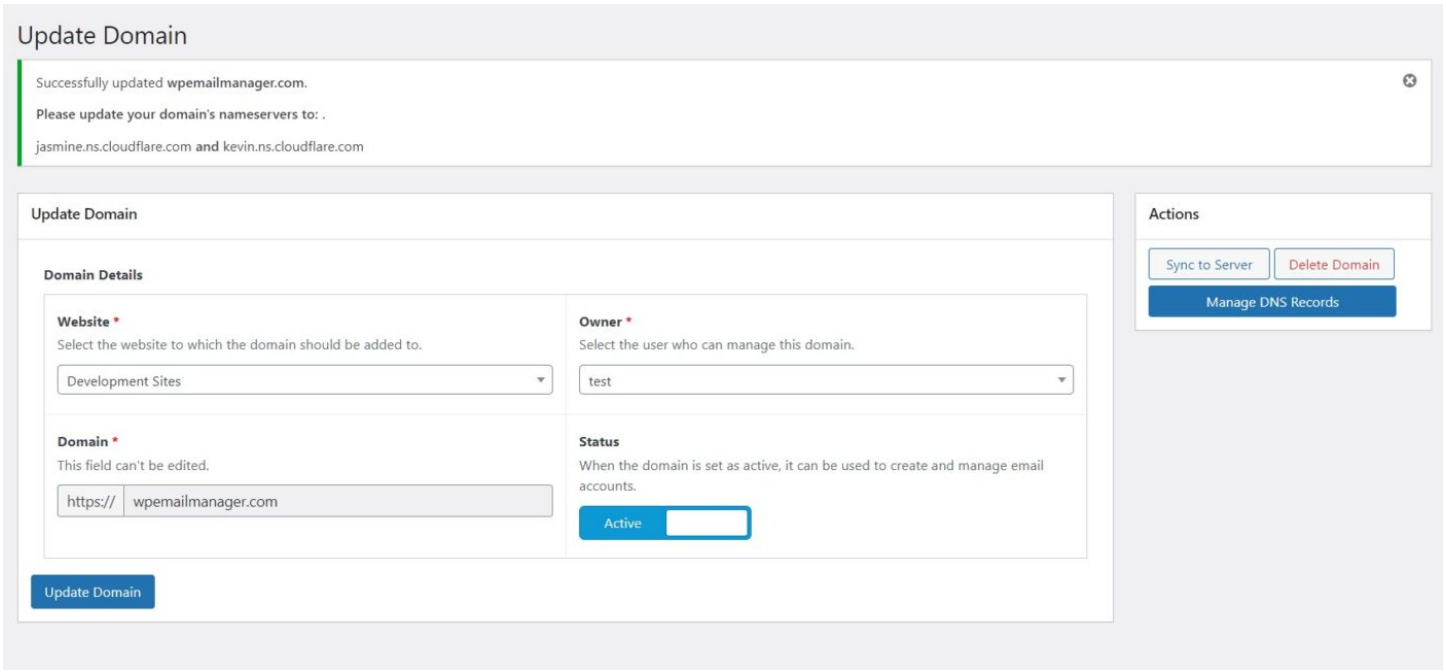

Cloudflare · https://wpemailmanager.com/docs/how-to-add-an-exisiting-domain-to-cloudflare/

To add an existing domain to cloudflare, go to **Email Manager > Domains** and edit that specific domain. On the update domain screen, shown below, click on update.

Update Domain

Once updated, the domain will be added to Cloudflare and its nameservers will be displayed.

Update Domain
Successfully updated wpemailmanager.com.
Please update your domain's nameservers to: .
jasmine.ns.cloudflare.com and kevin.ns.cloudflare.com
Update Domain
