How to Obtain Your WildDuck Access Token

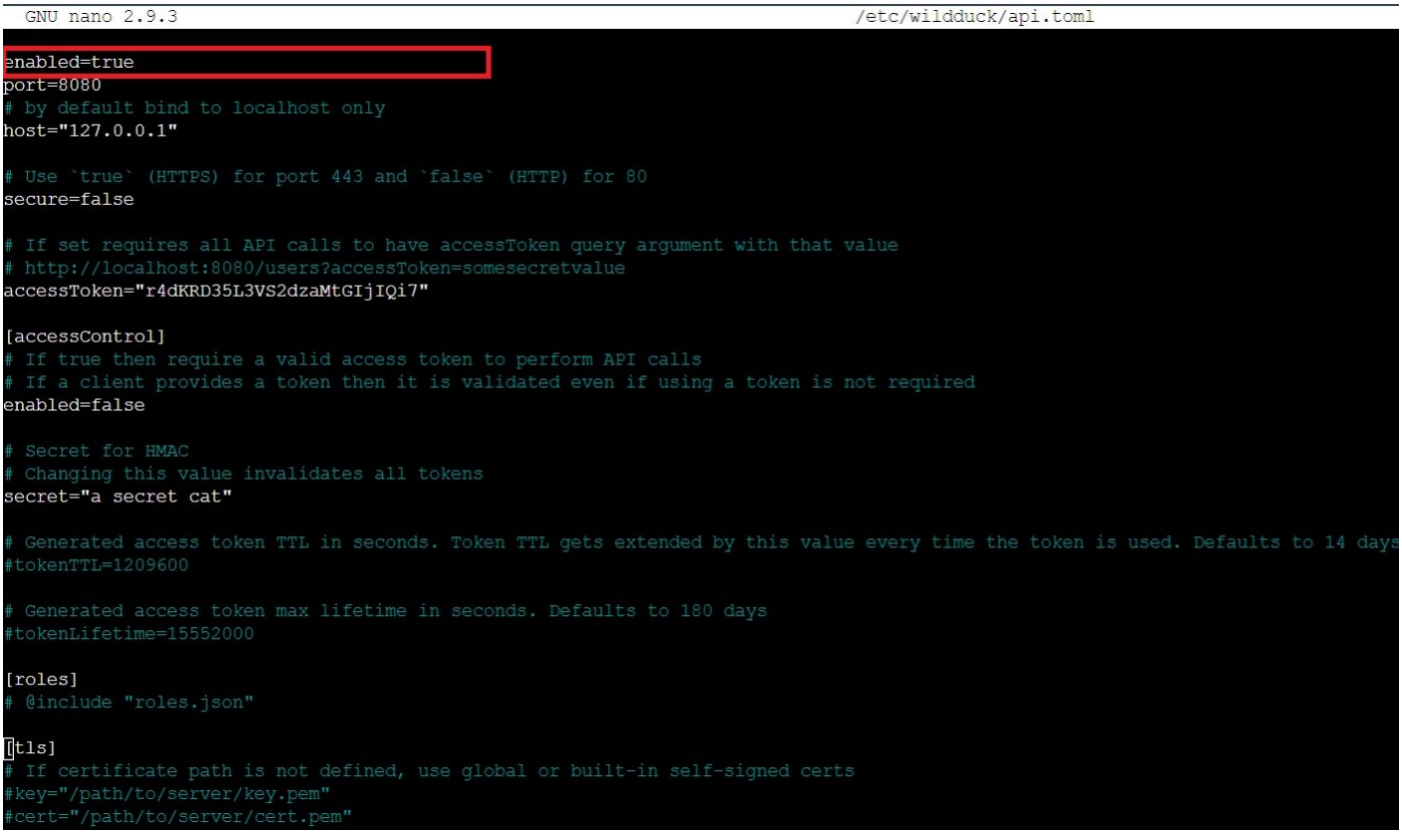

WildDuck · https://wpemailmanager.com/docs/how-to-obtain-your-wildduck-access-token/

Do the following to obtain your WildDuck access token:

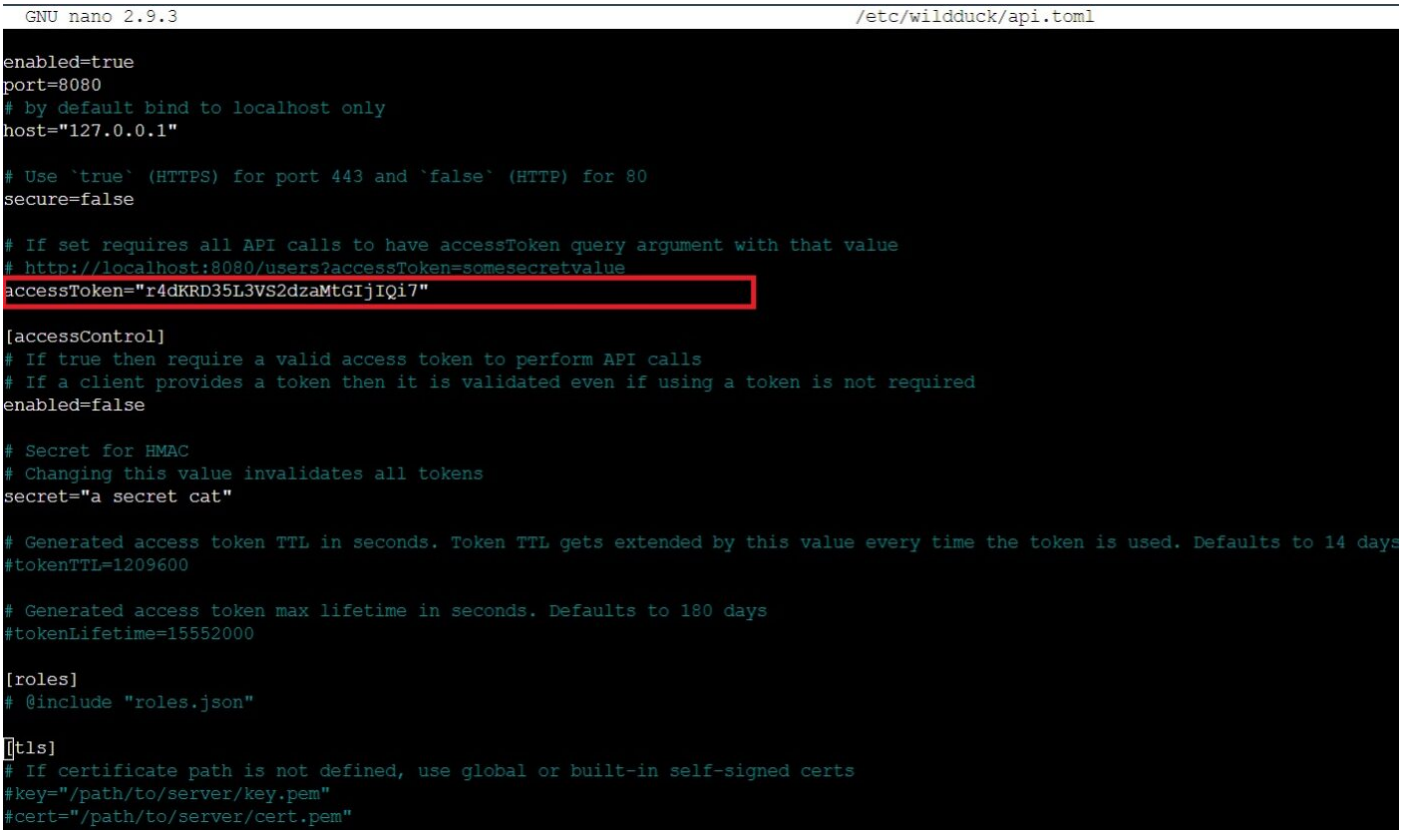

1. SSH to your server as a root user.
2. Open the *api.toml* file in WildDuck's installation folder using your favorite editor. In the following command, we use *nano* editor.

   nano /etc/wildduck/api.toml

3. Ensure that the API is enabled by setting *enabled* = *true* in the api.toml file.

4. Set the access token in the *accessToken* = '*someSecretValue*' setting. Enter a value that is hard to guess. This is the access token that you will use to configure the plugin in the general settings section.

5. Save your changes and restart the WildDuck service or server.

If you use Ploi's WildDuck email server, learn how to get access token here.
