How to Setup a Remote User in ISPConfig

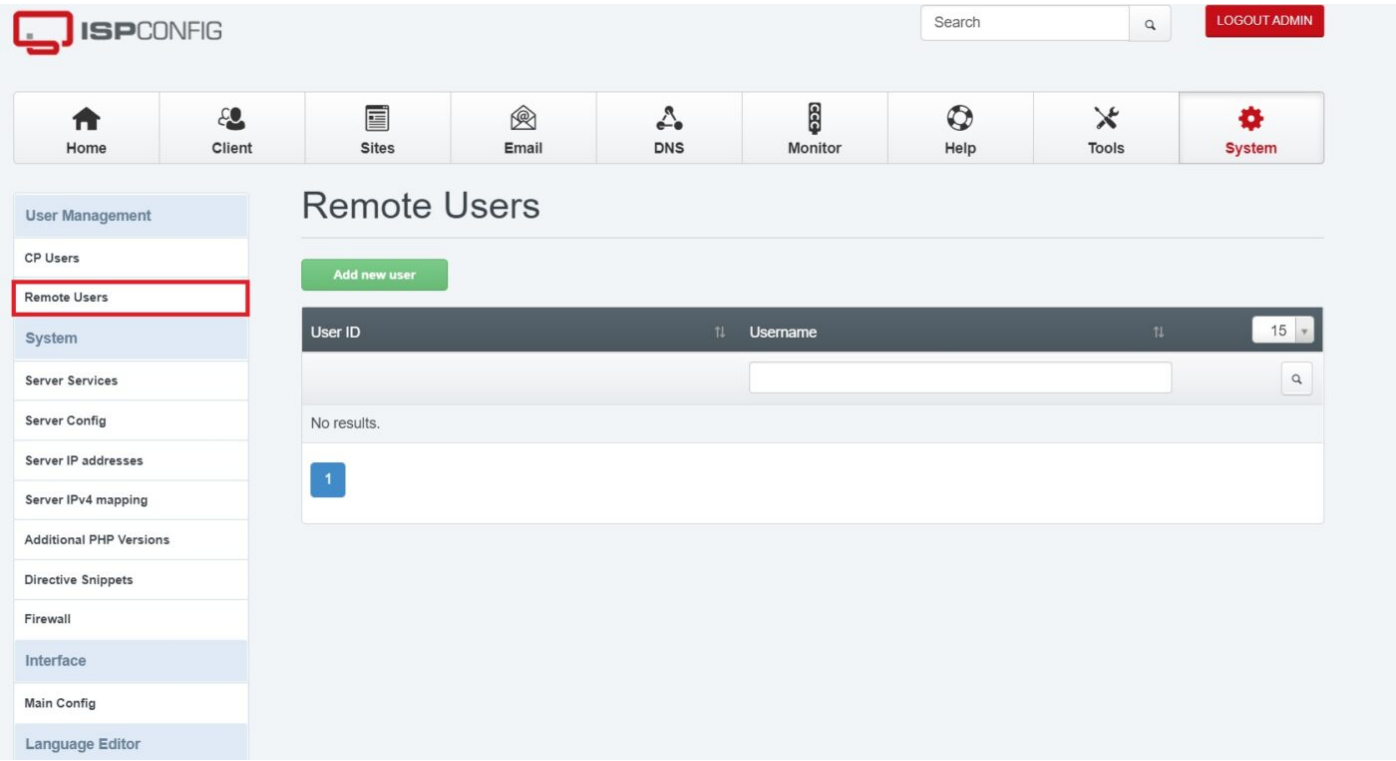

ISPConfig · https://wpemailmanager.com/docs/how-to-setup-a-remote-user-in-ispconfig/

WP Email Manager needs a remote user in ISPConfig inorder to interact with the server management system. Do the following to setup a remote user:

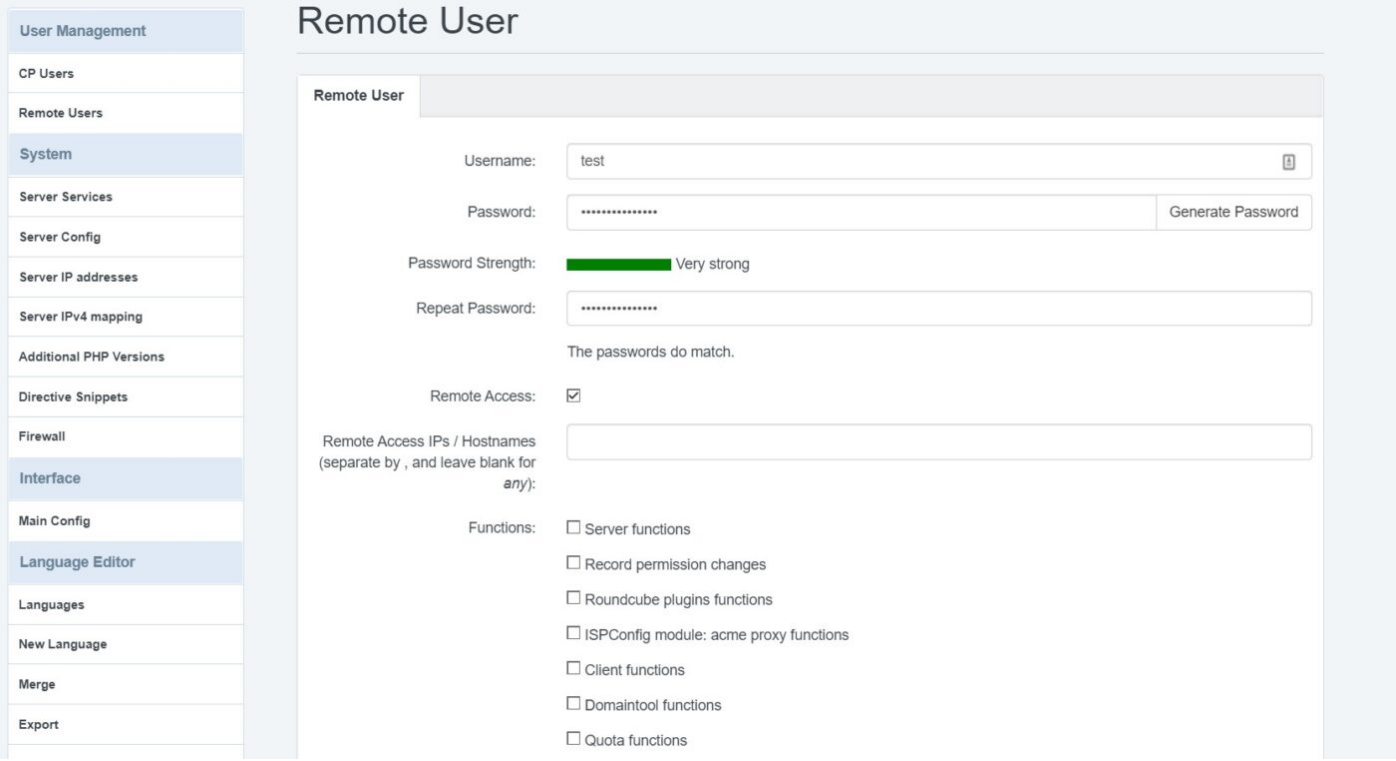

1. Login to ISPConfig's admin panel.

2. Click on the System tab to proceed to the System Page then click on Remote Users .

3. On the Remote Users page, click on Add New User.

Enable Remote Access and ensure that the following functions are selected:

- Quota functions
- Mail domain functions

- Mail user functions

4. Then save.
