Unautomated Integrations

Domain Manager · https://wpemailmanager.com/docs/unautomated-integrations/

The following integrations are not automated by Domain Manager addon since they require additional configurations such as setting up DNS TXT records for verification. The integrations are:

1. Mailbox
2. Mailbux
3. Mailcheap

While Domain Manager addon **may** display the required DNS records, we **strongly** recommend that you add the domain manually in the email server's administration area or first add the DNS records using the Cloudflare integration and try again. An error as shown below may occur:

DNS Verification Required Error (Mailbox Integration).
